

I agree with the sentiments expressed in this letter below, and ADD that IF our Commission were COORDINATING on Resource Development matters and not caving to federal agency policy over the years, our County could be doing quite well based on the wealth of resources located here. Wealth comes from the ground, not from a magic pot of gold far off in a district on the Atlantic coast.

All Montana Counties need to reflect on these points.

Subject: Rejection of covid dollars for sanders county

To: <cbrooker@co.sanders.mt.us>, <gmagera@co.sanders.mt.us>, <today@co.sanders.mt.us>

Dear commissioners,

I attended the meeting yesterday (27 Oct 21) to discuss the federal dollars being given to each locale to push the vaccine mandate. This is dirty money that is printed or borrowed dollars that does not need to be spent. I for one, along with millions of other Americans are sick and tired of the tax and spend party going on at all levels of government, but mostly at the federal level. This continued taxing of the public, only to dole it back to the communities for pennies on the dollar is insanity. If it was never taxed to begin with, our communities would have plenty of money to maintain their standard of living and to accomplish their local goals. It further destabilizes our economy by placing us further and further in debt and places that debt on future generations. We have dug ourselves into a hole so deep, it will only take one small catalyst to collapse it all, then where will our nation be? We will become another Venezuela, with hyper inflation and our dollars worth absolutely zero.

Currently, we are the world currency holder, but should our economy collapse, China and Russia are waiting on the sidelines gleefully waiting to take that role away from us and call in the debt. Now you may think that this \$111k won't matter much if you accept it, but when does it stop? Communities across this nation need to turn back that money. When president trump signed that first stimulus bill giving everyone \$1200, I sent mine back to the US treasury. My friends thought I was crazy. But I was trying to make a point not to spend that money for everyone. Someone has to take a stand against this outrageous spending and say NO. You have that opportunity to make that point to other counties in the state. Be an example. Don't just go with the flow of thinking it won't matter much. It does. Because later one, you can look at your kids and grandkids and tell them you didn't add to their debt burden.

For a second point, it was brought up that only 38% of the county residents have taken the shot. This tells me that 62% don't want it. You cannot justify taking this money for just 38% of the

population. Plus, how many in the community have already had covid and recovered? They gave natural immunity which is much stronger than these shots.

Most of the people are seeing the research coming out that over 17,000 Americans alone have died from the shot, and hundreds of thousands of people have had adverse reactions to it, including enlarged heart, blood clots, joint pain and many other issues. This shot was pushed out too fast for any reputable testing could be accomplished. The Moderna shot has now been banned in Sweden for people under 30 because of adverse affects. I personally have had several friends who have take the Pfizer shot and had unexplained illnesses and upper GI bleeds. The immune systems of those that had covid and then taken the shot have been depleted. Over 70% of the people dying from covid in Israel and Uk where their population is 90% vaccinated are the "fully" vaccinated people. We have surpassed the numbers of deaths in the US post vaccine than we did pre-vaccine.

The effectiveness of these shot drops basically off the scale after about 6 months. Then they want to push boosters. What is going to happen to our population after those who want the boosters take them in a few years? It's something I'm not willing to try out because I have seen the data.

Now they want to push it on kids and continue the fear mongering that covid can kill them. Kids have a higher statistical rate of dying from drowning, car wrecks, and many other childhood disease out there.

People try to equate that we vaccinate against MMR, so therefore we need to vaccinate against covid. No. The statistical rate of a child dying from measles is 1 in 3000. The statistical rate of a child dying from covid is 1 in 1,000,000.

We always do risk analysis in everyday life. Why are we being pushed into this shot for a virus that has a statistical rate of surviving at 99.8%? It's insanity.

DO NOT ACCEPT THE FEDERAL DOLLARS. TURN IT BACK.

A flu syndrome, which according to official data causes almost the same number of deaths among the elderly and weak people as any other normal seasonal flu, has been used as a pretext to sow terror amidst the population, thanks to the complicity of politicians, the media, doctors, and law enforcement.
