The July - August 2006 National Geographic Front Page Headline "Global Warming Your Vacation May Never Be The Same" and an interview by NG Traveler editor-in-chief Keith Bellows with Al Gore who is called a "global warming expert" according to NG.

You can find Al Gore’s background here http://www.freerepublic.com/forum/a39b3044f74b3.htm. He graduated from Harvard in "Government", after switching from an early major in English in which he floundered. He was only required to take one science course. He took a natural sciences survey course and got a grade of "D" which at Harvard according to this article (link above) in a gentleman's "F".

"Mr. global warming's foundation in scientific training was apparently just enough to render him gullable to the latest pseudo-scientific rationalization for government control and restrictions on individual freedom and human achievement which are always appealing to those whose inner reality is such that they could not compete or measure up if they had to make it in life on their own merit and effort, such as Mr. Gore."

His thesis was on the influence of television on national politics. During college, he worked one summer for the New York Times newspaper as an "office boy". He started his career as a reporter in Nashville, second shift night job. You will discover more about Mr. Gore's not so expert qualifications in this Free Republic article link above.

What a hype job this is. It puts the Salem Witch trials to shame.
The Ticking Climate Bomb

Many Americans are now forced by the impact of global warming on the planet, but we think they’re seeing it slowly. That’s why they’re hearing the stories and the statistics and the numbers. They are hearing the stories and the statistics and the numbers.

Real People are hearing the stories and the statistics and the numbers.

Yo look at the talk of the town: It’s a hot topic.

What do you see as the role of young people in combating global warming?

They need to share the title of the G20/7. It’s up for grabs.

The challenge represented by the climate change in a 21st century world is pressing.

And meeting this challenge can give us the ability to get moral clarity on a lot of other issues.

What do you say to climate expert James Lovelock’s prediction that by 2030 there won’t be any food?

Loveck is a smart man, and a smart person.

And his Gaia hypothesis, which he published in 1972, is true.

But his book is The Revenge of Gaia, and that is indeed a wake-up call.

As the environmental system approaches the boundary of chaos, and the predictions of how we will react to that are not far from the mark.

What do you see as the role of young people in combating global warming?

They need to share the title of the G20/7. It’s up for grabs.
