Alex Jones Show Live Feed

4 Reports Plus 1 Quote re. the Dangers of AI Data Centers

1. Alex Jones Interviews analytical scientist Mike Adams an AI Expert - <https://www.alexjoneslive.com/2026/05/19/if-you-really-want-to-understand-the-ai-revolution-takeover-this-is-the-one-interview-to-watch/>

- If you listen to this interview long enough the thrust is to bring up a world wide AI network of super large data centers to simulate real world events to breach individual privacy for control.
- Expert speculation brings up the question why are they demanding so much power beyond any common sense prior uses.
- I think the cover story IS mass simulation and the real story IS mass surveillance, **i.e. "mass simulation = mass surveillance.**
- Mike Adams web site is - <https://healthranger.com/>.
- Alex is also saying that big Tech e.g. Google and Apple are aligning themselves with China CCP and have infiltrated academia to use big Technology for blanket surveillance.

2. **Report - Land, energy, water for data centers are 'non-negotiable prerequisites' for global AI infrastructure, digital embassies: WEF**

- <https://sociable.co/government-and-policy/land-energy-water-for-data-centers-are-non-negotiable-prerequisites-for-global-ai-infrastructure-digital-embassies-wef/>

3. **Report below email & linked from American Policy Center - **The Political Hot Potato AI Data Centers****

- https://americanpolicy.org/2026/05/18/the-political-hot-potato-ai-data-centers/?mc_cid=b46bf3c357&mc_eid=b8bc0b4d42

4. **Jack post to X below for the bottom line reality to local Montana rural coop energy prices.**

- a) Montana Flathead Electric Coop, our rural power supplier coming from Bonneville Power, implemented a demand charge **May 2019 of 25 cents/KWHR which has grown to \$4/KWHR over the last 6 years.**
- b) We are penalized to use power from 7 to 10 AM and from 5 to 8 PM during the week days when we need it the most and this is on top of the normal rates.
- c) The Snake River Dams in Washington are being threaten by the usual sources.
- d) The USA has 90% of its national potential capacity in NON POWERED DAMS SO WE HAVE THE ENERGY,
- e) In fact one Montana legislator is trying to legislate to power just one unpowered dam in Montana.
- f) Globalism has infiltrated America over the last 20 some years and this includes the weaponization of our own government agencies.
- g) Here is pitch from an expert on Globalism presented in Hamilton, Montana **March 2, 2010. 16 years ago!**

- I met Michael in the Puget Sound long ago when he presented this pitch for a local South Sound Property Rights group and have the honor of him on my distribution.
 - <https://www.freedomforallseasons.org/RuralCleansing/Globalism%20vs%20America-Hamilton%20MT.pdf>
 - His web site is - <https://www.freedomadvocates.org/>. **CHECK IT OUT.**
- ❖ **Flathead Electric Rural Coop Demand Rates are up 250% per year since 2019.**
- **Increasing penalty year over year for peak hour usage 7 - 10 AM and 5 - 9 PM week days.**

JacksRanch ✓

@jacks9961

The graph below is our Montana Flathead Electric Coop so called Demand Rate escalation for the past 5 years since they invented this massive rate increase disguised as a "demand charge" when you want to use electrical power during the morning or late afternoon when you need it the most.

America is under growing global to local siege by the big bucks to reign her in so she can be controlled and not be the light house of freedom, liberty and divine free choice.

One of the main wholesaler power suppliers to Montana have decided it is more profitable to make a deal with big data centers than to drop the "demand rate" scam demand.

Check out how the global to local crooks steal it all then charge you for the pain. - freedomforallseasons.org/FreedomFromAlt...

And 99% of Montanan's will swallow the lie it is just a lack of power scam-dematic.

5:56 PM · May 11, 2026 · 2 Views

5. "Looking forward, AI will strain global grids and the world is underestimating how energy-intensive the revolution will be, Al Jaber said.

"In many ways, the AI race is an electron race," he said, noting that the speed of AI-driven decision-making can be the difference between continuity and disruption during a crisis."

P.S.

I. Alex Jones is saying America has largely been infiltrated by Chinese CCP.

II. I pass thru my alma mater at Montana State University Bozeman Montana occasionally and the last visit a large smiling heavy Chinese student met me at the research lab.

III. When I was going thru engineering at Bozeman MSU in the 1960's I would fear two type of students walking into the class, married student housing Vets and foreign Asian students, both very serious types.

New Article:

[The Political Hot Potato: AI Data Centers](#)

by Patti Johnson

POLITICAL BACKLASH

Alarm bells are sounding across the USA on one of the hottest bipartisan issues of the 2026 elections: AI data centers. Voters from both parties are united in their opposition,

actually protect and represent us, or sell out to Big Tech and its massive AI data centers? In Florida, this growing backlash is hitting especially hard, as residents watch Rep. Byron Donalds' gubernatorial campaign get flooded with millions from AI billionaires eager to turn the Sunshine State into their next profit playground at the expense of our water, air, power bills, and quality way of life.

Byron Donalds: Florida's Next Governor or Silicon Valley's Water Boy?

As a Florida resident deeply opposed to the unchecked invasion of AI data centers in our state, I see Rep. Byron Donalds' gubernatorial campaign for what it is: a direct threat to our quality of life. While Donalds touts himself as a leader backed by President Trump, his biggest new supporters aren't everyday Floridians. They are billionaire AI titans pouring millions into his race to turn Florida into their next profit playground.

A pro-AI super PAC called Leading the Future, funded by heavy hitters like OpenAI President and co-founder Greg Brockman and the founders of Andreessen Horowitz, has pledged about \$5 million to boost Donalds' bid for governor. This marks the group's first big push into a state race. Their strategist claims Donalds "gets" the economic upside of AI. But what about the real costs that Floridians will bear? [\[1\]](#) [\[2\]](#) [\[3\]](#)

These massive AI data centers are resource-devouring behemoths that drain watersheds, spike electric bills, pollute the air, generate sickening noise, and destroy communities. One large facility can suck up to 5 million gallons of water per day for cooling, enough for a town of 10,000 to 50,000 people. Nationwide, AI-related data centers could consume up to 32 billion gallons annually by 2028. In water-stressed Florida, with our aquifers already under pressure and springs at risk, this would be catastrophic. [\[4\]](#) [\[5\]](#)

Rural communities across America also deserve fierce protection from this invasion

Some claim that placing these centers in rural areas, forests, and farmland would solve the problems by keeping them away from cities where complaints are increasing. I live in the country precisely to escape industry and overdevelopment. I do not want these facilities anywhere near my farm, draining my watershed, polluting my air, or blasting noise that makes people and animals sick. Even if promoters swear electric bills will not rise or watersheds will stay safe during droughts, those are empty promises. These

industrial wastelands with no regard for the people who call them home. ^[6]

The constant sound you hear living one half mile from an AI Data

Center: <https://x.com/conspiracybot/status/2053563881252069521?s=20>

We chose country life for its clean air, quiet nights, productive farmland, and natural beauty, not to become dumping grounds for Silicon Valley's greed. Data centers pave over hundreds of acres of prime farmland with concrete and steel, erasing agricultural land forever while offering minimal local jobs. In rural Georgia, a Meta facility left residents hauling water in buckets because their wells filled with sediment and turned undrinkable. Northern Virginia's rural expanses have lost thousands of acres, with constant generator exhaust worsening asthma and heart issues. In Texas and Arizona, rural families endure jet-engine noise causing insomnia, vertigo, migraines, and plummeting property values as profits flow out of state. Florida's rural areas must not suffer the same fate. We need ironclad protection to keep these thirsty, noisy polluters out of our countryside entirely.

National forests also targeted

No place is sacred to big tech. President Trump has aggressively loosened environmental restrictions and fast-tracked permitting on federal lands through executive orders aimed at rapidly building AI data centers on public property to bypass community opposition. Now America's playgrounds, the national forests and wild spaces where families camp, hunt, and escape industrial sprawl, are being eyed as prime locations for these sprawling tech fortresses. It is like the whack a mole game: citizens protest and stop a data center from opening near their community and the mole pops up somewhere else, the national forests.

Across the country, the destruction is undeniable.

Projects in places like Palm Beach County, Florida already highlight the nightmare in my state: massive footprints chewing up land, constant noise from cooling systems and generators, and fears of higher utility rates as power grids strain. Residents report nonstop low-frequency hums that disrupt sleep and health, plus air pollution from backup diesel generators linked to respiratory issues, asthma flares, and worse. ^[7] ^[8] In Florida,

carpet for these mega-centers is madness.

In **Northern Virginia's Data Center Alley**, thousands of massive diesel generators spew particulate matter and nitrogen oxides, worsening asthma and heart disease. Data centers consumed nearly 2 billion gallons of water in 2023 alone. In **Newton County, Georgia**, a Meta data center uses 500,000 gallons daily turning wells brown for nearby residents. New proposals threaten to more than double that.

In **Arizona** and **Texas**, facilities devour water in already stressed regions, driving up electricity rates as utilities revive dirty plants and pass massive costs to families. Noise levels reaching jet-engine roars cause headaches, insomnia, vertigo, and plummeting quality of life in rural spots. Farmland vanishes under concrete. This list goes on and on.

The United States already has too many AI Data Centers.

According to Cloudscene, a comprehensive database often cited for total facilities, there are approximately 5,427 data centers. [United States of America | Data Center Market Overview | Cloudscene](#)

Here are links for other maps of US data centers (big and small):

→ <https://trackdatacenters.com/>

Residents in many states are organizing to fight this Tech Goliath threatening their way of life.

Citizen Pushback Examples:

- **Oregon:** Strong resistance in areas like Cascade Locks (project blocked) and ongoing concerns in high-desert/rural zones competing with agriculture and water needs. [\[9\]](#)
- **Indiana:** Heavy protests in Indianapolis and central Indiana against Meta, Google, and others over water (e.g., Eagle Creek reservoir) and quality-of-life issues. Multiple projects delayed or withdrawn due to public outcry. [\[10\]](#) [\[11\]](#)
- **Ohio:** Pushback in rural and suburban areas near large Google/Meta campuses; concerns over farmland loss and grid strain.
- **Missouri:** Towns like Peculiar blocked projects via zoning changes; residents in other areas voted out council members who approved data centers. [\[12\]](#)
- **Broader trend:** Over \$64 billion in projects blocked or delayed nationwide due to local, often bipartisan, opposition. Common issues include millions of gallons of daily water use, diesel generator pollution, constant noise, higher electric bills, and loss of farmland. [\[13\]](#)

Call them what they really are: AI Surveillance Centers

Byron and other candidates and elected officials claim we need these facilities for national security, to win the AI race, and to bring jobs to Florida. But the only real winners will be the tech billionaires and the politicians whose campaign coffers they fill. The true purpose of these massive AI data centers is to spy on everyday Americans, not just illegals, by collecting data on every aspect of our lives for the ultimate goal of tying us into a system of globalist control. They are not tools for our freedom or safety but the exact opposite. These centers will link every street-corner camera, smart appliance, automobile, Ring doorbell, phone GPS location, and countless other devices into centralized databases that track and control us all.

AI is making our students dumber

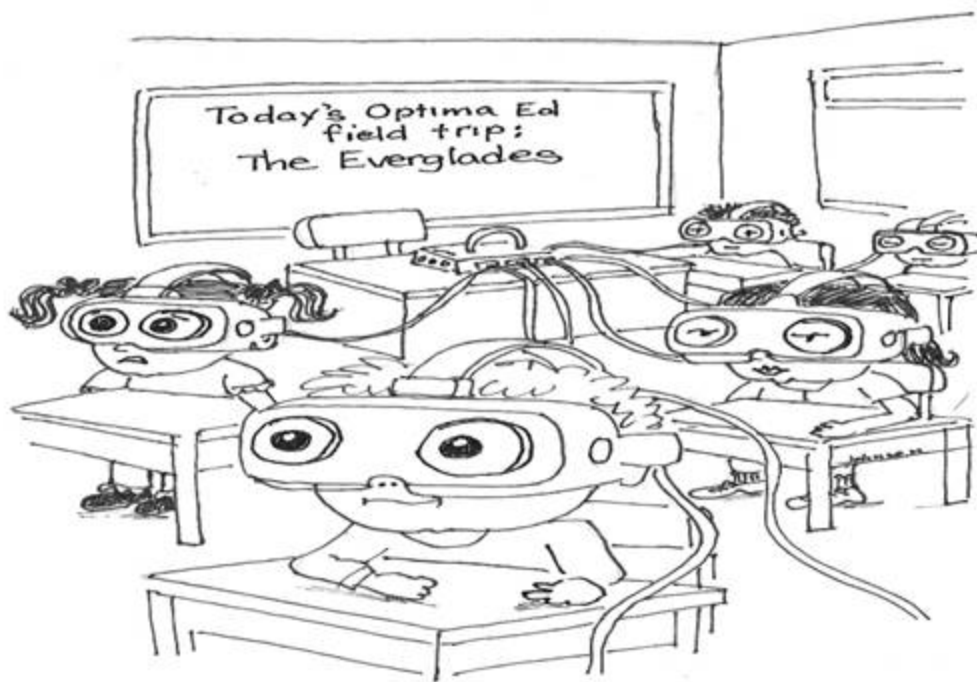

Recently Erika Donalds, wife of Florida gubernatorial candidate Byron Donalds, said her goal for Florida's public schools is to use AI instead of hiring teaching assistants: "We've always wanted teachers to have a teaching assistant in every classroom. This gives them 12 teaching assistants or more." ^[14] Her goal for Florida fulfills a long-held Technate dream of replacing human teachers with AI agents. If her husband is elected, she will start the ball rolling by replacing human teacher assistants with AI agents.

Dustin Heuston of Utah's World Institute of Computer Assisted Training (WICAT) stated, *"We've been absolutely staggered by realizing that the computer has the capability to act as if it were 10 of the top psychologists working with one student...Won't it be wonderful when no one can get between that child and that curriculum?"*

Erica Donalds is the founder and CEO of Optima Ed, an online education technology company. She stands to make millions by placing AI teaching assistants in every Florida classroom by routing funds from the nonprofit Optima Ed to her for-profit companies, a practice she has previously used with taxpayer dollars from charter schools.

OptimaEd (also styled as Optima or operating as **Optima Academy Online / OAO**) is an education technology company founded by **Erika Donalds** in 2020. It specializes in **immersive virtual reality (VR)** and online learning solutions, blending classical education principles (Great Books, virtue-based, critical thinking) with cutting-edge technology like VR headsets (e.g., Meta Quest) for virtual field trips, metaverse-style classrooms, and interactive lessons. [erikadonalds](#)

Because who wouldn't want to reduce our children's ability even further to interact with other human beings? And won't every child just love never leaving the classroom by going on virtual field trips? Could this be another reason Byron Donald's want more AI data centers in Florida? Aren't they concerned about the health dangers of children's developing brains exposed to radio frequency emissions and the effects of unnatural light hitting their eyes from the daily use of VR headsets in the classroom?

For more information on how technology will dumb down education even further: [Johnson: The Dumbing Down of Education Through Technology - The Federal Observer](#)

Byron Donalds: Ready to Sell Out Florida

Donalds' team talks about "responsible innovation" and American leadership in AI. But his silence on the super PAC and his alignment with the data center push signal he is ready to sell out Florida's future to out-of-state billionaires. While Gov. Ron DeSantis pushed measures to force these centers to pay their own way and protect ratepayers, Donalds' backers want fewer guardrails so they can expand faster. ^[15] ^[16] This is not leadership. It is being bought. Donalds has raised big money overall, but this \$5 million injection comes straight from investors with billions tied up in AI tech. Not from retirees, farmers, or small business owners worried about their rising bills and drying wells. Florida citizens deserve a governor who puts our watersheds, clean air, affordable power, and peaceful neighborhoods first, not Silicon Valley's bottom line. ^[17]

Our water, air, and future are not for sale.

data center growth, calling for stronger oversight or pauses. Byron Donalds, backed by AI billionaires instead of everyday citizens, would be a disaster for our state. We need leaders who protect Florida's precious resources, not auction them off for tech profits.

All across the country angry citizens whose eyes have been opened by watching the destruction of their states by AI Surveillance Centers are basing their votes in the next election on whether a candidate is a tech sell-out or will truly represent the people. We do not need more data centers for national security. America can lead in AI without sacrificing our communities, water supplies, health, schools, and rural way of life to billionaire profits.^[18] ^[19]
